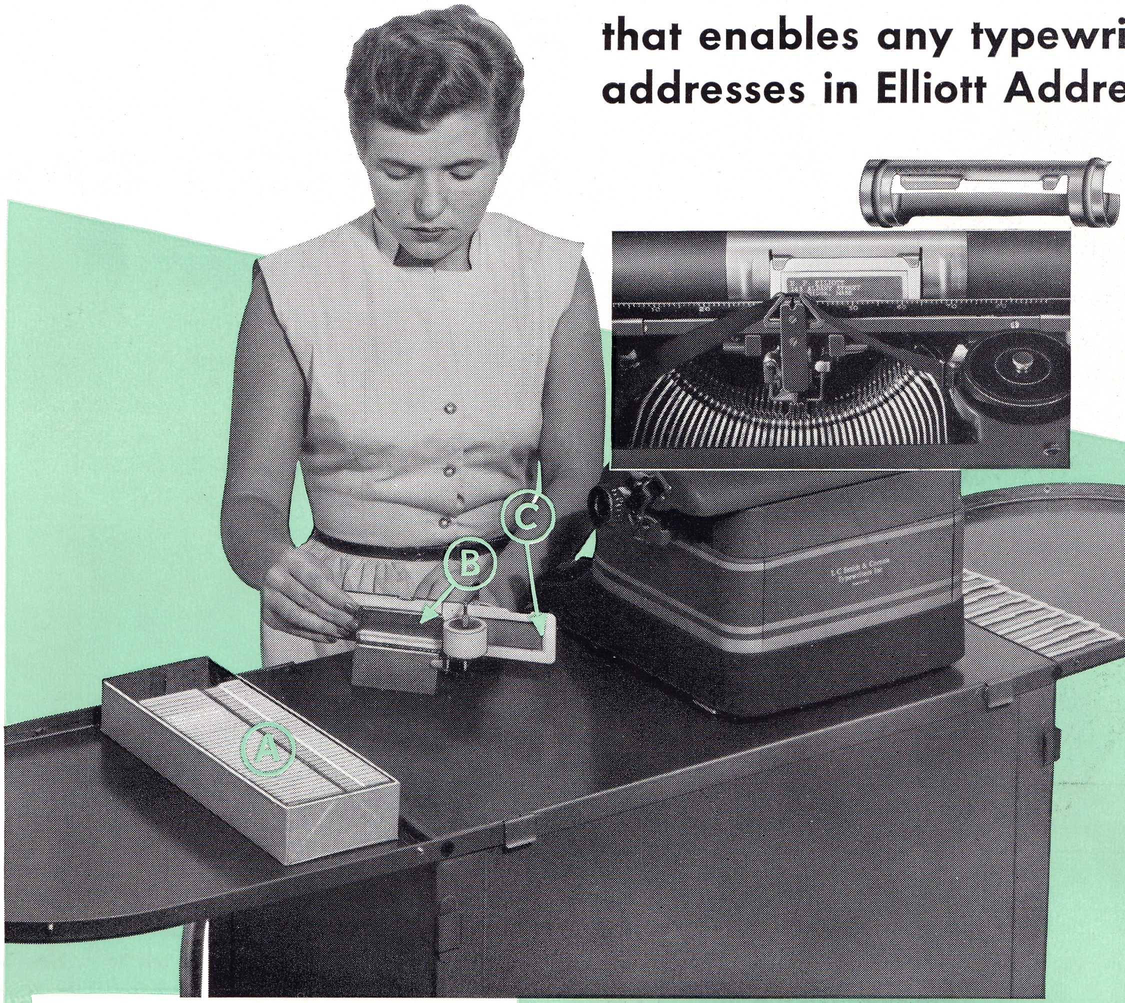
Here is the *Elliott* TYPEWRITER PLATEN CLAMP

that enables any typewriter to stencil addresses in Elliott Address Cards



A
B
C
L C Smith & Corona Typewriters Inc

And at the left is shown the Stencil Moistener used with it.

Address Cards in box marked "A" are blank — just as you receive them from the Elliott Addressing Machine Company.

Address card marked "B" is being inserted between the wicks of the *ELLIOTT Stencil Moistener*. This single operation is automatically pushing the card marked "C" out of the moistener and through a pair of *blotter rolls,* ready to be inserted in typewriter for stenciling.

At the right is shown the special L C Smith-Elliott Address Stencil Typewriter which moves the Elliott Address Cards up and down vertically against the front of the typewriter platen instead of bending the Elliott Address Cards around the typewriter platen.

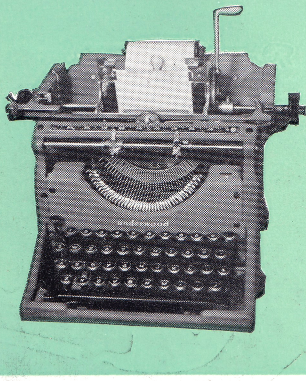
Shown above is the special Remington Electric Typewriter with attachment for moving Elliott Address Cards vertically against the front of the typewriter platen — and the high-speed automatic feed Stencil Moistener.

A Special Elliott Stenciling Attachment is also made for the IBM Electric Typewriter.



The Special Underwood Typewriter with Elliott Address Stencil Attachment is shown at left.

A Royal typewriter with Elliott Address Card Stenciling Attachment is now being readied for production.
